Introduction:

This document represents the Sprint 1 backlog for the *Cinema E-Booking System*.

It contains user stories derived from the system requirements and organized by **epics**.

Each user story is uniquely numbered to align with its epic and corresponding functional requirement.

User Roles Definition:

User (Guest):

A web user who accesses the system without logging in. Guest users can browse movies, view showtimes, start booking selections, and view pricing information, but must authenticate to complete checkout and purchase tickets.

Authenticated User:

A registered user who is logged in to the system and has an active session. Authenticated users can complete ticket purchases, manage their profile, maintain favorite movies, receive movie recommendations, and access purchase history.

Administrator (Admin):

A privileged, authenticated user authorized to manage system data and operations, including movies, showtimes, ticket pricing, promotions, and user accounts, and to view system usage statistics.

Epic 1: Browse & Search Movie Catalogue (Juniper Shepherd)

US-1.1: Home Page and Movie Listing

As a customer, I want to see which movies are playing in theaters and which are coming soon to theaters and relevant information about them on the home page.

Acceptance Criteria:

- Home page displays currently playing movies and coming-soon movies as listings
- Listings contain movie title, category and showing dates
- Users can browse all movie listing information

US-1.2: Movie Search by Title

As a customer, I want a search bar for movies I want to go see.

Acceptance Criteria:

- Users can search for movies by title on the home page with a search bar
- Searches update home page to display listings that correspond to search results

US-1.3: Filter Search by Genre

As a customer, I want to sort search results by movie genre so I can see the movies I'd be interested in.

Acceptance Criteria:

- Users can filter a search by genre with a filter option in the search bar
- Filter functionality works with movie title search, so users can search for a given movie title with a given genre
- Searches update home page to display listings that correspond to search results

Epic 2: Login and Account Management (John Henry Walker)

US-2.1: Login (JHW)

As an Authenticated User, I want to be able to log into my account with my email and password and choose to stay logged in, so that I can securely access my profile to purchase tickets and access various features.

Acceptance Criteria:

- Valid Login: Entering a valid registered email and correct password establishes an active session and directs the user to a home page or active checkout.
- Invalid Login: Entering an incorrect password or email blocks access, and displays a generic invalid field error message.
- Remember Me Option: A checkbox is available during the login that, if selected, will keep the user authenticated while on the same device once successfully logged in. They must logout manually.

US-2.2: Account Status Restrictions (JHW)

As an administrator, I want the system to verify account status flags during login, so that suspended or unverified users are blocked from accessing restricted features.

Acceptance Criteria:

- Unverified Accounts: Attempting to log in with an account that has clicked a registration activation link blocks authentication and displays an error saying "Please verify your email address to activate your account"
- Suspended Accounts: Attempting to log in with an account flagged as deactivated or suspended by an administrator blocks authentication and displays an error saying: "This account has been suspended. Please contact customer support".

Epic 3: Book Tickets & Checkout

We assume that the user has selected a showtime while browsing or searching in Epic 1 stories.

Write the order confirmation as one story.

Booking selections

US-3.1: Select Ticket Types and Quantity (Asher Oortman)

As a customer, I want to choose how many tickets I need by age category so that I am charged the correct price for each ticket.

Acceptance Criteria:

- User can select a quantity for each age category (Child, Adult, Senior)
- Each category displays per-ticket price
- A subtotal updates automatically as ticket quantities change
- User cannot continue with zero tickets selected

US-3.2: Select Seats (Asher Oortman)

As a customer, I want to pick my seats from the auditorium layout so that I can choose where I sit.

Acceptance Criteria:

- User sees a seating map for the selected showtime, with available seats distinguished from already booked seats
- The number of seats the user may select equals the total number of tickets chosen in US-3.1
- Selected seats are visually marked and can be deselected
- User cannot proceed until the number of selected seats matches the ticket quantity

US-3.3: Start Checkout and Temporarily Lock Seats (Brandon Bohrer)

As a customer, I want my selected seats to be held while I begin checkout so that another customer cannot purchase the same seats while I am completing my order.

Acceptance Criteria:

- After the user selects the correct number of seats, the system temporarily locks those seats for 5 minutes
- The user may browse and select seats without logging in, but must log in/register before checkout
- If user is not already authenticated, system redirects user to log in/register then returns user to checkout after auth
- If the 5 minute seat hold expires before checkout is completed, selected seats are released and user returns to seat selection

US-3.4: Review Order Summary and Apply Promotion Code (Brandon Bohrer)

As an authenticated user, I want to review my ticket order and apply a promotion code before paying so that I can confirm the details and receive a discount if valid.

Acceptance Criteria:

- The checkout page displays an order summary with movie title, show date and time, selected seats, ticket categories, ticket quantities, ticket subtotal, taxes, online booking fees, and final total
- The user can enter a promotion code during checkout
- If the promotion code is valid, the discount is applied and the final total updates
- If the promotion code is invalid or expired, the system displays an error message and does not apply a discount
- The user can go back to modify ticket quantities or seats before payment

US 3.5: Advertising and Promotion (Jason Dinh)

As an administrator, I want to inform authenticated users about any current promotions or subscription models in the scenario in which they would like to add it at checkout.

Acceptance Criteria:

- The checkout page will have a pop-up of an on-going promotion where the user will be given an option to “Learn More”, or opt to decline with “No, thanks.”
- If the user decides to opt to “Learn More”, it will continue to lock the seats while the user is given more details about the promotion.
- If the user decides to sign up for the promotion, they will be re-prompted with an option to apply a promotion code as earlier.
- If the user decides to decline the promotion, it will continue by moving onto the payment page.

US 3.6: Payment and Order Confirmation (Jason Dinh)

As a customer, I want to be able to securely pay for my ticket order and receive an emailed receipt of my transaction as well as an email of the tickets.

Acceptance Criteria:

- The checkout page will prompt the user to enter in their credit card information.
- Beneath the payment information, there will be an order summary of the amount of tickets to be purchased as well as the cost of the total.
- The user will be given a button to confirm the payment.
- If the transaction is successful, the seats will be permanently locked and an email of the receipt and the ticket QR code will be sent to the email address of the account holder.
